

Born in 1974 in Elista, Russian Federation, Erdni Batyrev graduated in solid state physics from Tomsk State University in 1997. In 2001 he moved to Amsterdam to study heterogeneous catalysis within the PhD project at University of Amsterdam as a post-doc at the Condensed Matter Physics group, Free University Amsterdam, he studied hydrogen storage in intermetallics. Since 2004 he is Principal Researcher at Tata Steel Research Technology and Development, the Netherlands. His research interests focus on physical properties of new materials and surfaces, functional coatings and hydrogen interaction with solids.

Understanding the activity of Zn-Cu sites in methanol synthesis
