WAVE

A General Purpose Code for Synchrotron Radiation

Michael Scheer
February, 2009

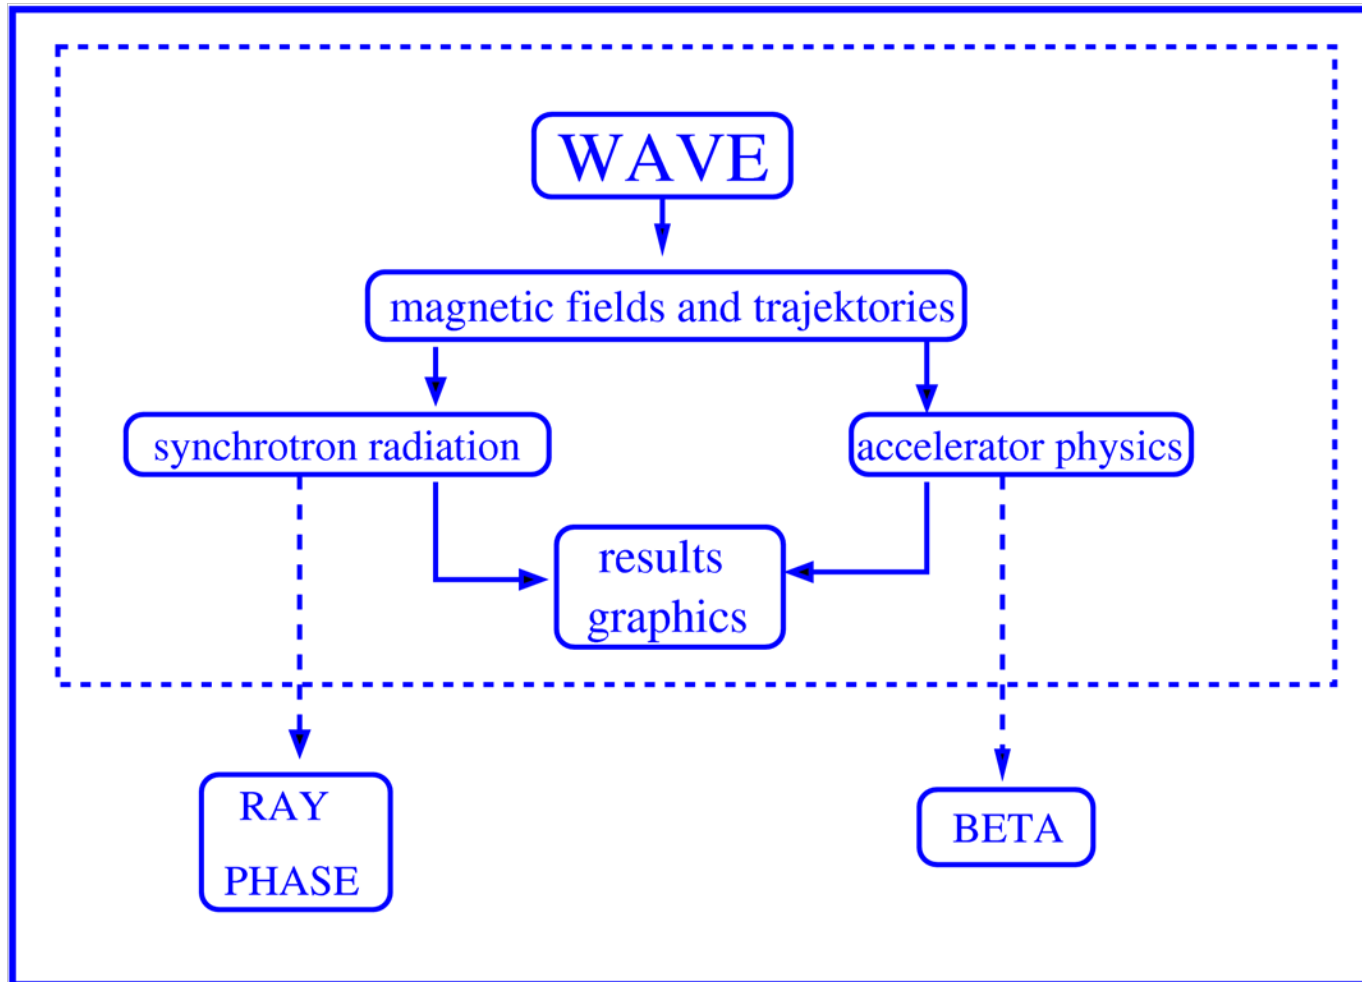

WAVE is controlled by input files to be run in batch mode

GUI:

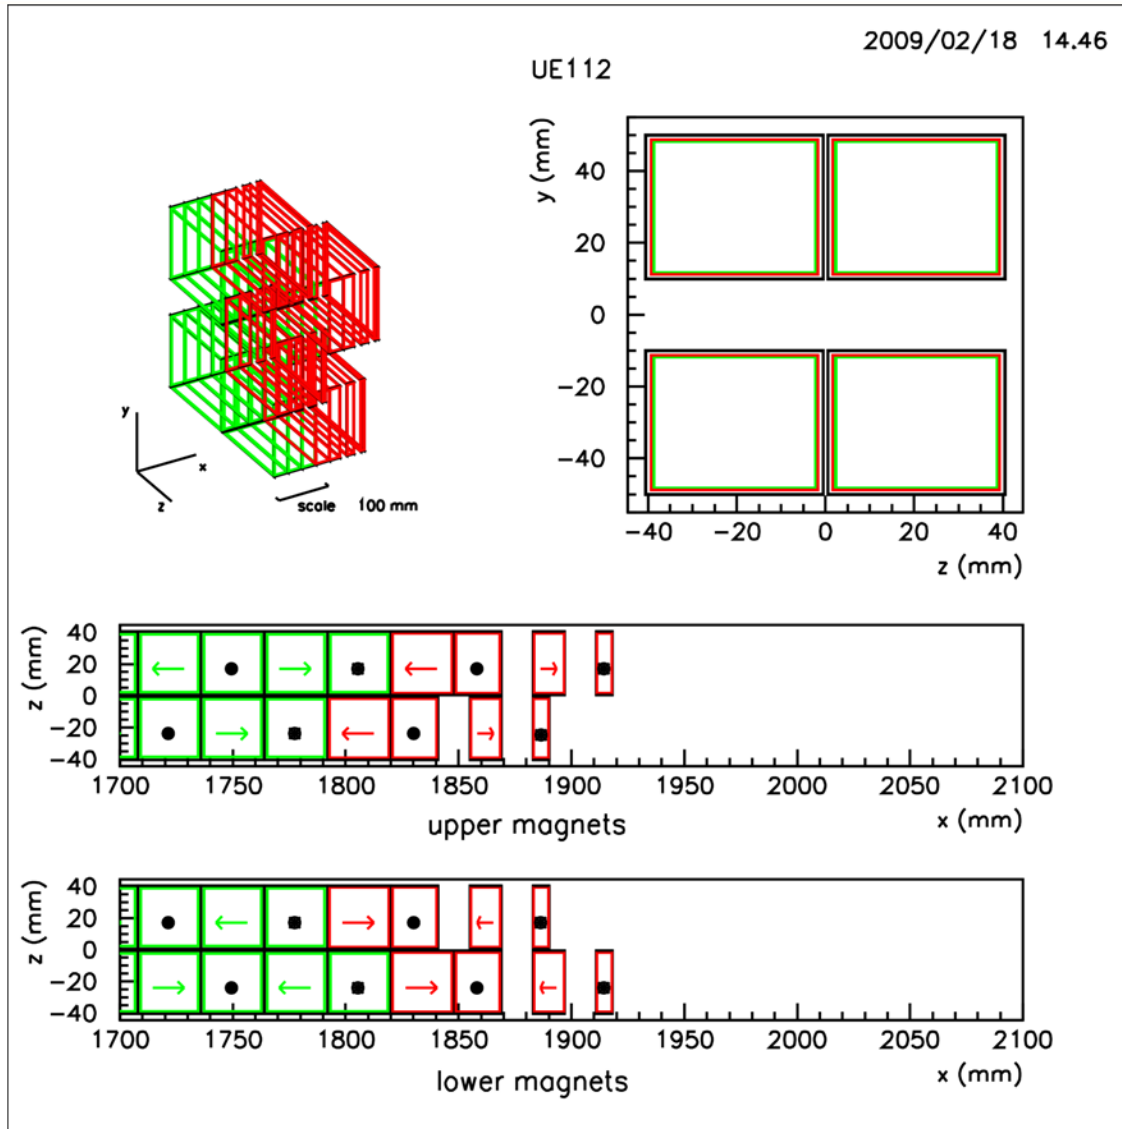

To handle files and visualize results

Based on Perl-Tk and PAW

- Magnetic fields
- Synchrotron radiation
- Accelerator physics of insertion devices
- Interfaces for RAY, PHASE and BETA
- Runs on various platforms

- Planar and helical wigglers and undulators as analytical models of permanent magnet structures
- Tapers and field errors of insertion devices
- Dipoles, quadrupoles, sextupoles with fringe fields
- In- and output of magnetic fields maps or tables
- Maxwell-conform parametrization and interpolation of magnetic fields

REC model
of UE112

endpole
configuration

parallel shift

Vertical and horizontal fields

Elliptical Undulator
UE112

shift = $\lambda/4$

Elliptical Undulator UE112

shift = $\lambda/4$

1. Track particle and find sources
2. Calculate radiation coherently for each source
3. Sum up contribution of sources incoherently
4. Apply filters, emittance folding, e-spread folding etc.
5. Integration of flux and power distributions over pinhole

Field, sources,
and spectral
flux of a super-
conducting
WLS

Evaluate integral numerically for steps of trajectory

$$\int_0^{\Delta T} \frac{1}{R(t)} \frac{\vec{n}(t) \times [(\vec{n}(t) - \vec{\beta}(t)) \times \dot{\vec{\beta}}(t)]}{(1 - \vec{\beta}(t)\vec{n}(t))^2} e^{i\omega(t+R(t)/c)} dt$$

For each integration step:

ω - independent part is treated as constant
phase is expanded to first order

For infrared radiation, velocity term can also be calculated

Formula of Schwinger as alternative for wiggler mode:

Field strength of source point is calculated from trajectory according to position of observer

Results of both methods agree to 10^{-5} for a constant dipole field

Horizontal distribution of synchrotron radiation of the UE56

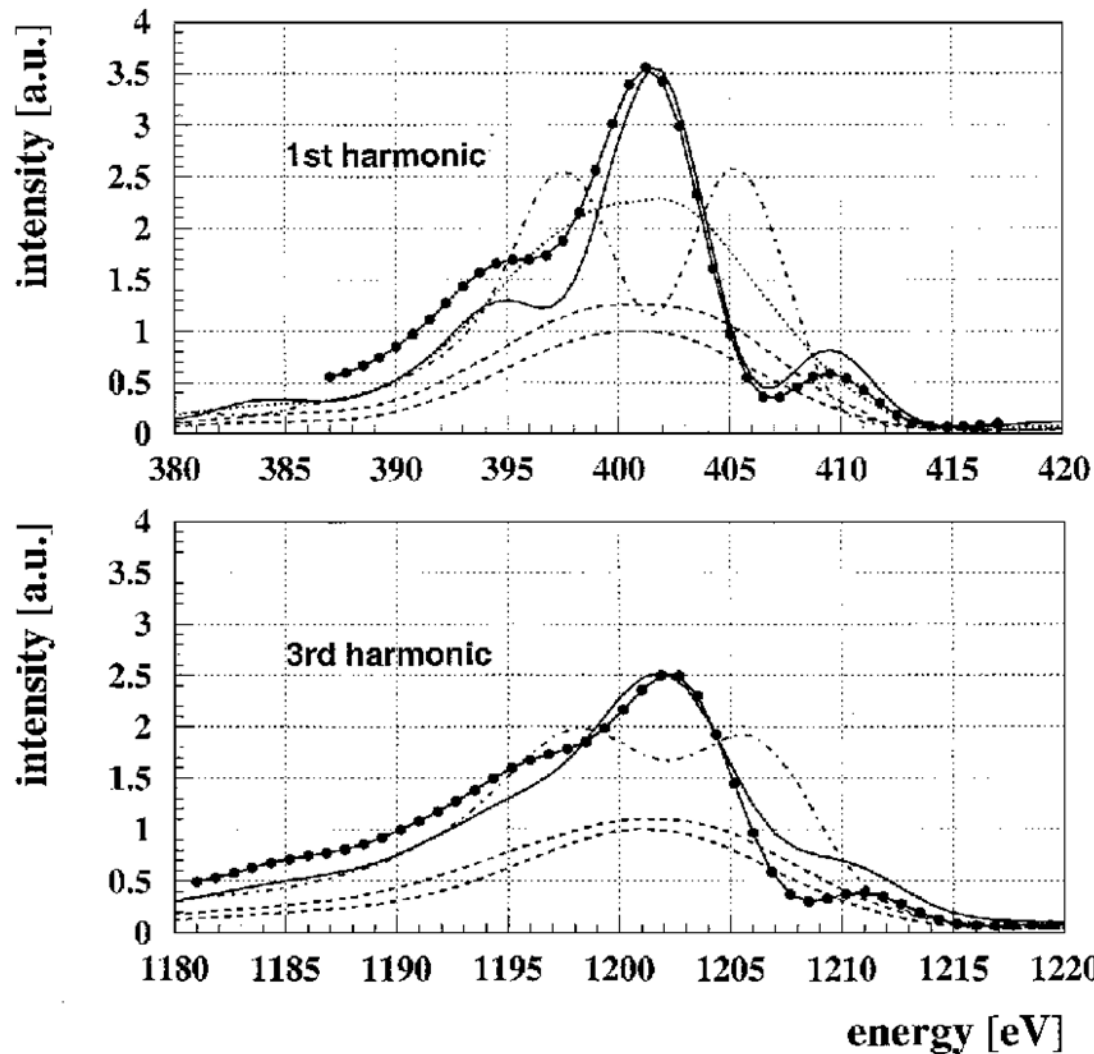

Comparison of
measurements
and WAVE
calculations

Marker:
Measurement

Solid line:
WAVE

Dashed line:
Slicing signal

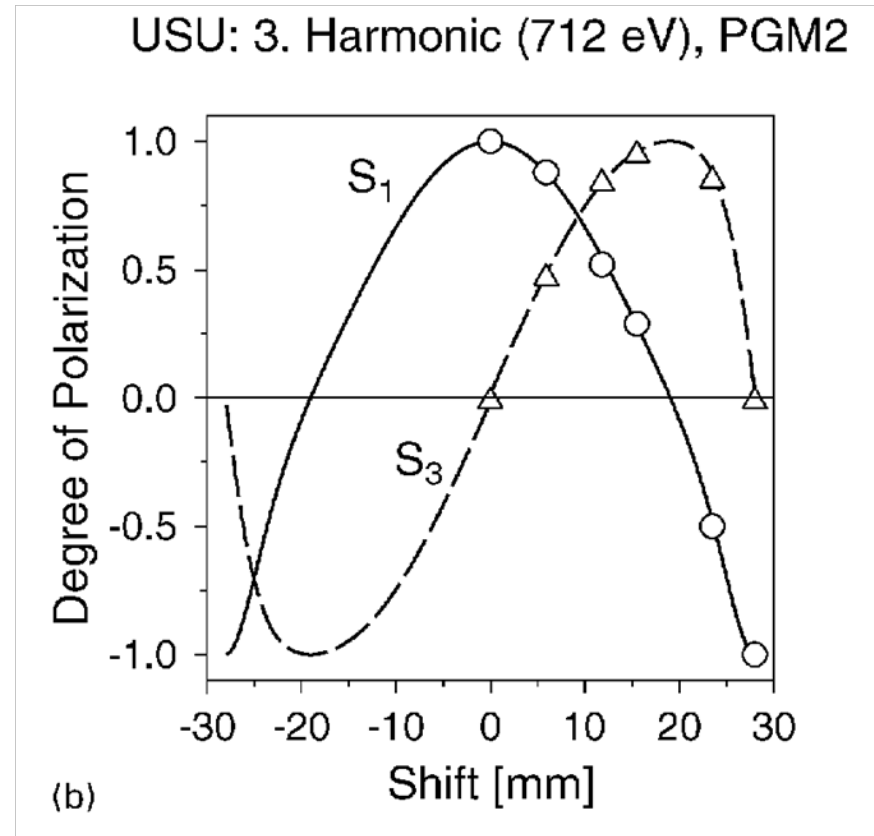

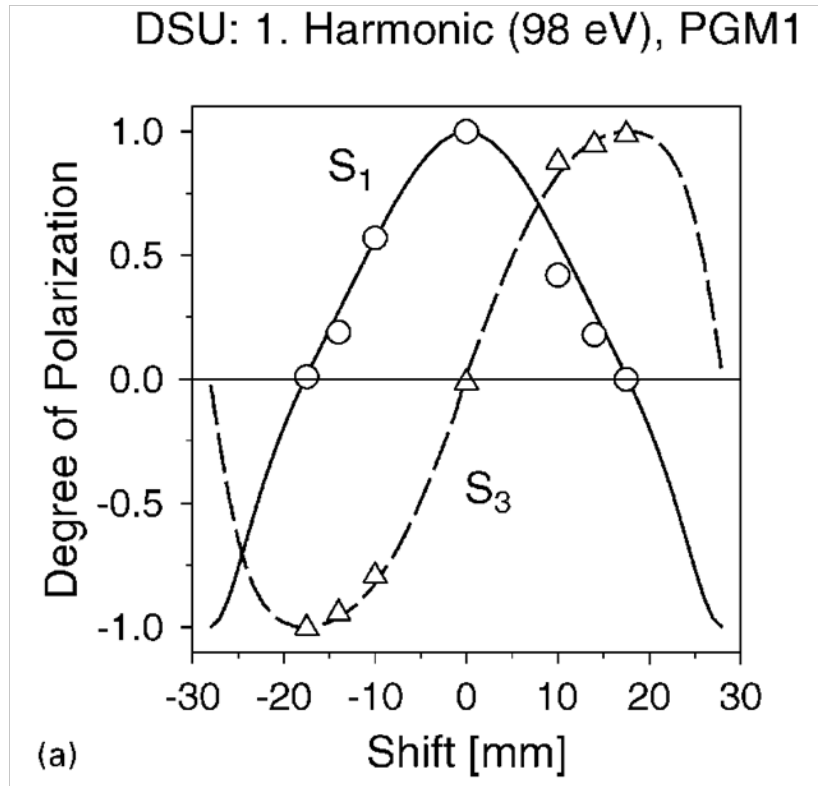

Interference of two coupled UE56

Solid line:
Constructive interference

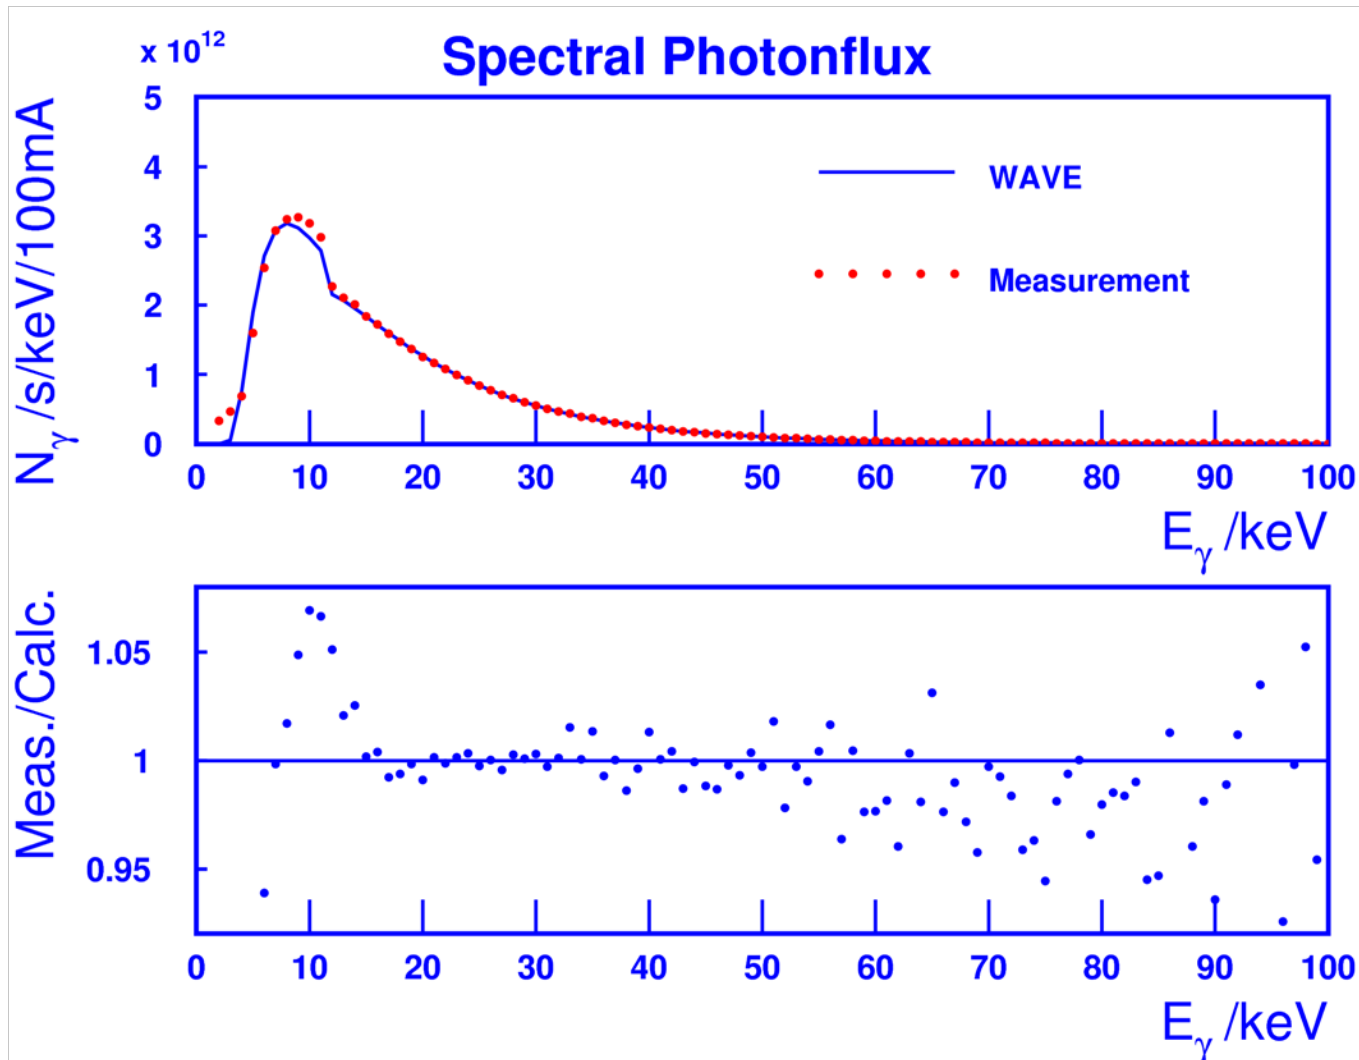

Marker:
WAVE calculations
Magnets are modeled
by current sheets

Dashed and dotted line:
Destructive interference,
contribution of each UE56
and incoherent sum

Markers: Measurements

Lines: WAVE calculations

Calculation and Measurement of absolute photon flux of a 6T-WLS

Ratio of measurement and calculation

Field Amplitude in the Centre of an Elliptical Undulator

Field amplitude of an elliptical undulator, transformed from 10m down-stream to the center of the device
